GETTING STARTED

Your free subscription to BlockTrust enables you to receive carcass data from our industry partners if your cattle get scanned at one of their facilities or at one of their partner packing plants.

To get started:

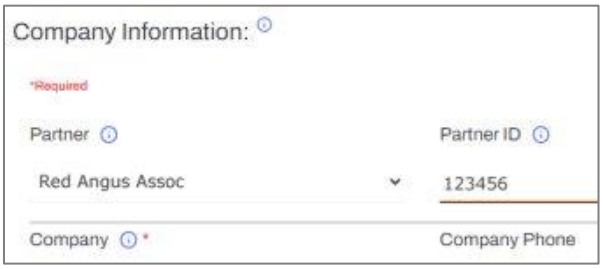

Create your Account

1. Go to https://blocktrustnetwork.com

2. Click 'Register' on the far right of the menu bar.

3. Choose 'Red Angus Assoc' from the Partner Drop Down Box and enter your RAAA account number in the 'Partner ID' box. This will associate your new account with your RAAA account.

4. Enter the remainder of the account information. The 'Company' is the name of your ranch.

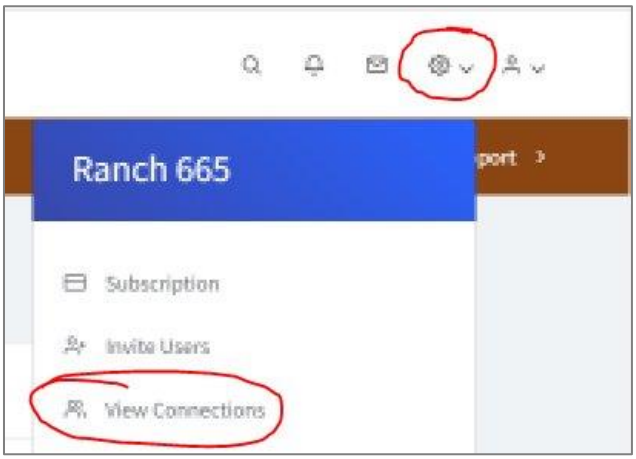

5. Enter the User Information for the main user (you) in the 'User Information' section on the bottom. Phone number is optional, but it will help in the future with customer support and 2-Factor Authentication.

6. Click 'Sign Up' to complete the process.

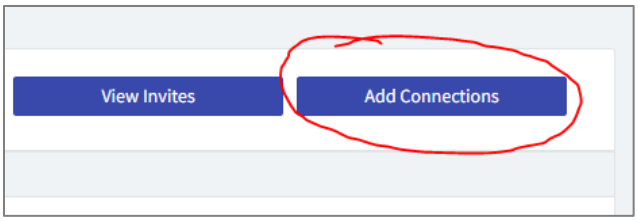

Create your private networks

For others to see your data, you must give your permission. You can select one or all of the existing industry partners or enter a new one. If you enter a new one, the system will invite the new partner to join the network.

1. Once logged in, click the little 'Gear' in the upper right corner of the screen and select 'View Connections' from the drop-down box.

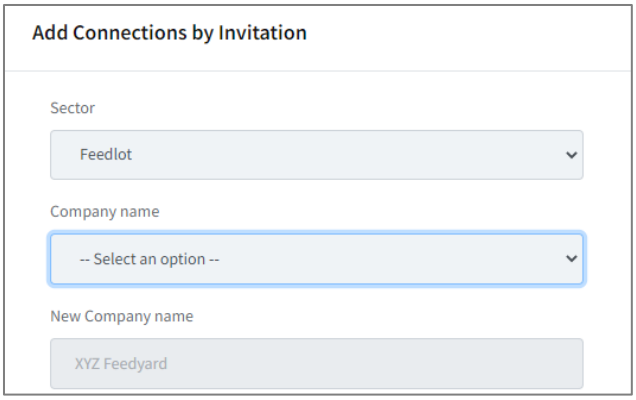

2. On the 'Connections' page, choose 'Add Connections' from the button in the upper right corner of the screen.

3. On the 'Add Connections' page, follow these steps:

    a. Choose which sector you want to add. For example, if you want to add a feedlot, choose 'Feedlot. Once you choose a sector, a drop-down box will appear with a list of the current partners in that sector. If you don't see your partner, you will enter it in 'New Company name'

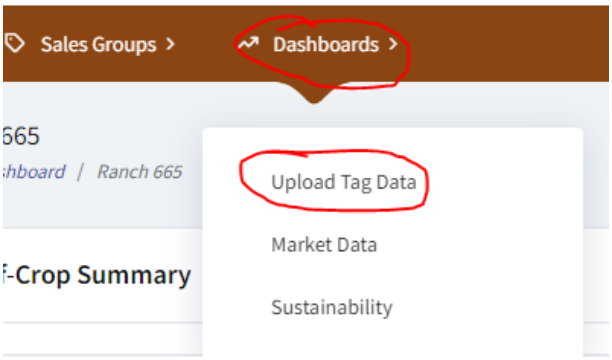

Once you add your partners, you will be able to see any data accumulated for animals scanned by that partner.

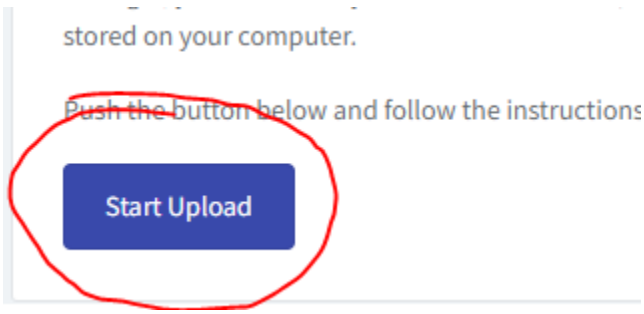

Upload your Tag Data

All information is tracked by using the Electronic ID (EID Tag) as the common identifyer across the beef supply chain. If you are not a part of one of our partners that sends us tag data, then you will have to upload your tag data.

1. Go to 'Dashboards' on the main menu and in the drop down menu you will see 'Upload Tag Data' Click this link.

Click 'Start Upload' at the bottom of the page.

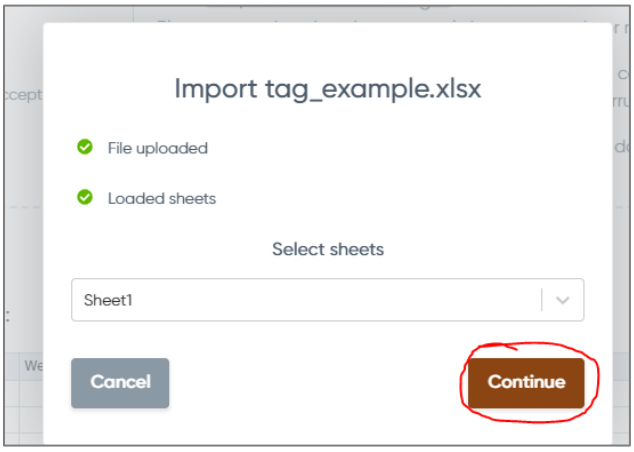

2. The page called 'EID Import' is where you can upload your tag numbers. First step is to make sure you have your tag numbers in an Excel spreadsheet or Comma Delimited File with the at least one column of numbers and a header (title of the column). You can upload as much data as you want but you have to have the EID number. We recommend that you upload your EID list and an additional column with the visual ID (tag number on the front of a large panel tag). If you want to upload more data (like Date of Birth, Date of Weaning, etc.) just add more columns. You can have as many columns as you want.

    a. Here is an example of a spreadsheet ready to be uploaded:

	A	B	C	D
1	electronic ID	Visual ID		
2	840003127153605	12345		
3	840003127153606	12346		
4	840003127153607	12347		
5	840003127153608	12348		
6	840003127153609	12349		
7	840003127153610	12350		
8	840003127153611	12351		
9	840003127153612	12352		
10	840003127153613	12353		

    Once you have the spreadsheet, you can drag it over to the "EID Page" and drop it in or you can press the "Upload data from file" button to find the file and upload it.

    b. Once you upload the file, you will see this confirmation screen. If you Excel file has more than one sheet, select it, then press "Continue"

    c. The system will find the row it thinks is the column header. If it is correct, press "Yes". You can also press "Select Another Row" or "No header row".

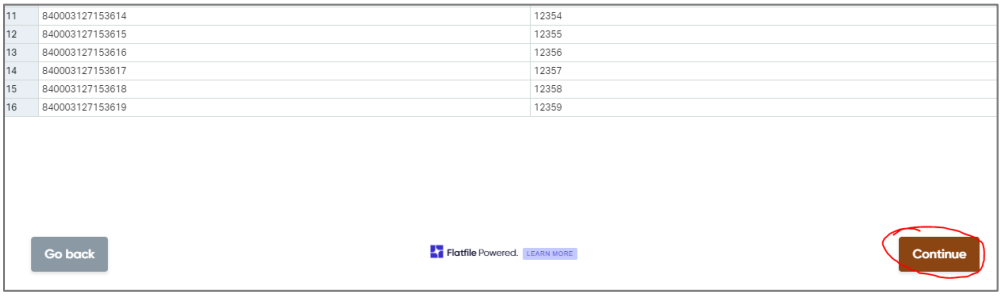

d. The program will match up your fields to the system fields and let you confirm:

e. Once all the fields are verified, press “Review”:

f. The system will show you what your import will look like. If there are any rows with any problems, it will let you know. If everything looks good, press “Continue”

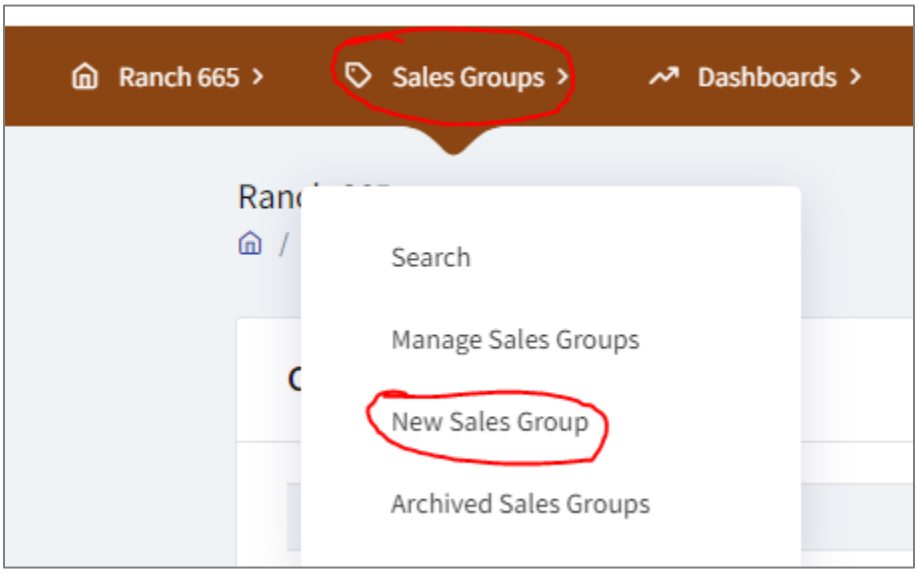

g. THAT'S IT! One more screen will confirm, and you are good to go!

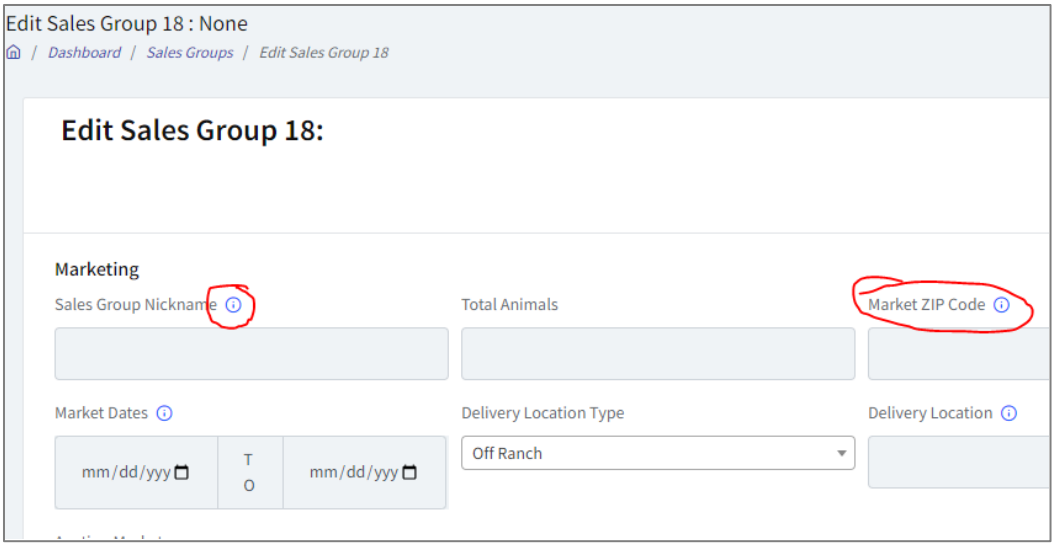

Create a Sales Group

By using our MarketTrust™ system, you can market your cattle to specialized buyers who are demanding quality animals who are tagged and have data attached. Within the BlockTrust system, these are called 'Sales Groups':

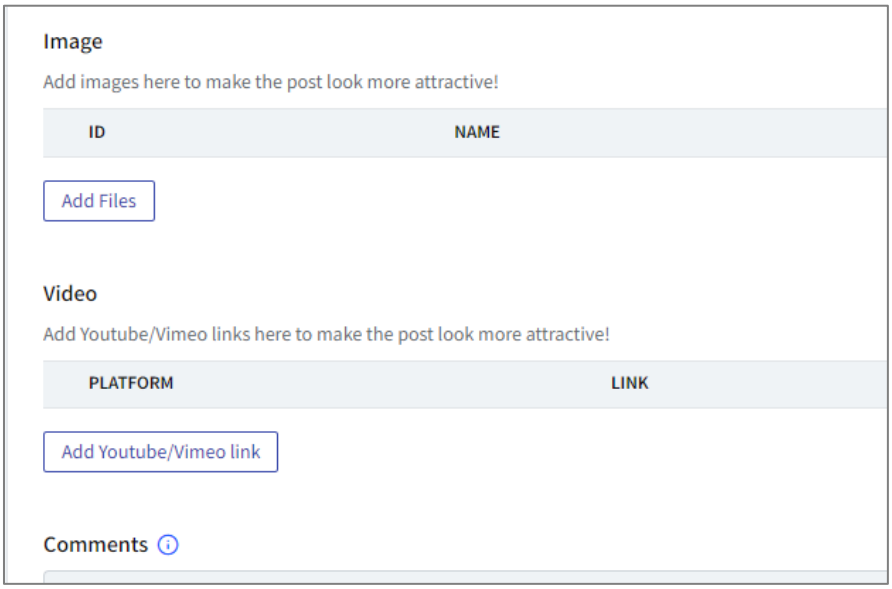

1. Go to the main menu and choose 'Sales Groups'. From the drop down menu, choose 'New Sales Group':

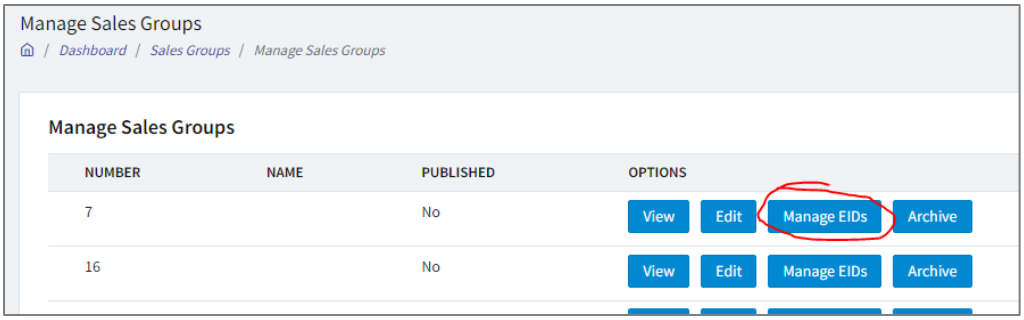

2. On the "Edit Sales Group" screen, enter as much information as you can. This is information buyers are seeking when evaluating you're the calves for sale. Most fields will have an 'information' icon next to it to show you the meaning of the field. The 'Market Zip Code" is the zip code where the animals will be picked up. This is very important as it is part of the search process. If you choose to market your animals at an auction market, you will be able to choose the market. If you choose to market the animals elsewhere, you can choose the location (i.e. off ranch).

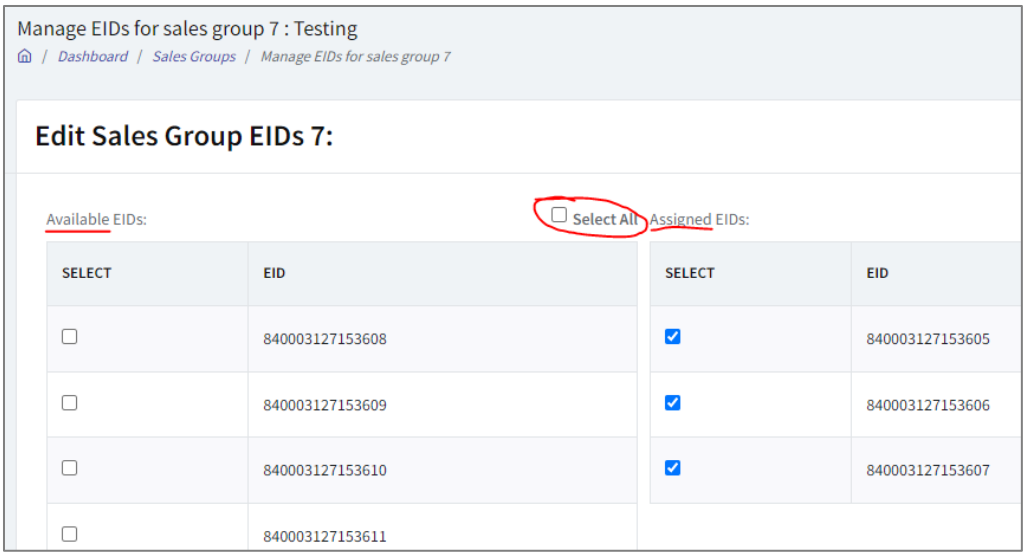

3. Upload photos and video (links) to your page by using the tools toward the bottom of the screen:

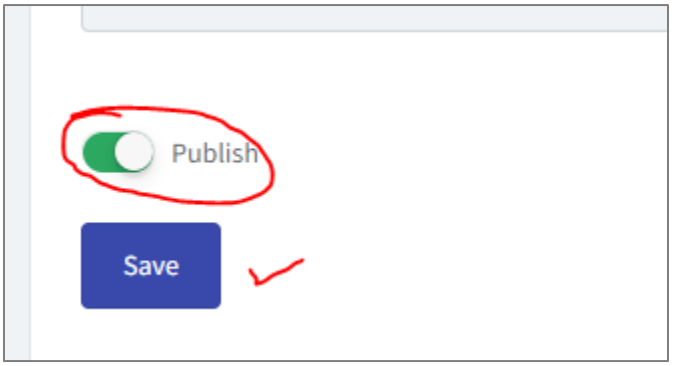

4. Associate a group of tags with the sales group. Buyers will expect cattle in the sales group to be tagged and they may want to view individual data. To associate tags with a sales group go to “Manage Sales Group” and choose ‘Manage EIDs:

5. The tag numbers on the left are all available tags. On the right will be the numbers in this sales group. If you are selling all the animals in this sales group you can choose "Select All" – this will move these numbers in the the "Assigned EIDs" list and associate them with this sales group. In this example only 3 are chosen:

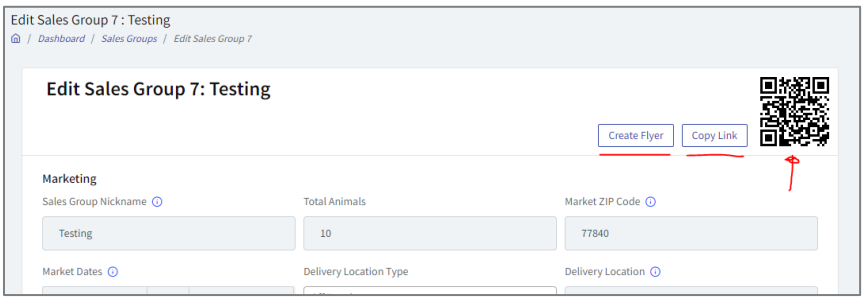

6. Once your 'ad' is perfect, press 'Publish' and 'Save':

Important Notes about sales groups:

- Your sales group will only be ‘published’ inside the BlockTrust network to other partners interested in purchasing quality animals with tags. It will not be published on the Internet. Publishing it to other BlockTrust partners will also increase the chance of you getting back valuable carcass data.

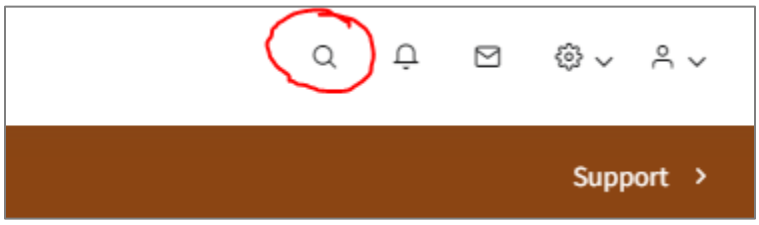

- Every sales group comes with its own QR Code which will enable prospective buyers to scan it to get more information about the cattle for sale. There is a also a button that will create a PDF flyer with the information or you can copy a link to the information that can be used to for external advertising or posting on social media.

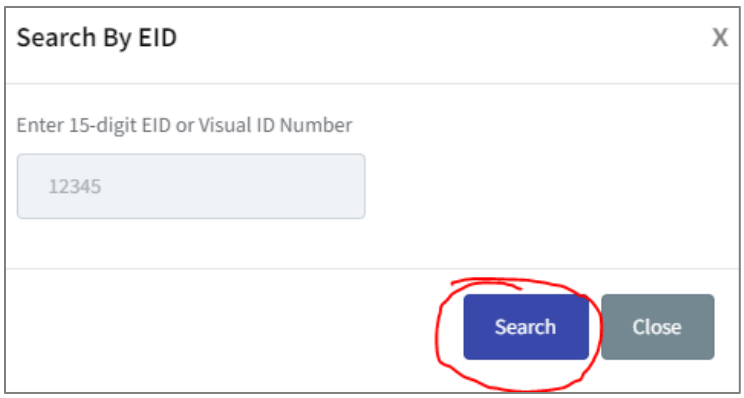

Other Program Features

Tag Lookup

Anytime you want to search for a tag, either by Electronic ID (EID) or visual tag number, go to the ‘Search’ icon located on the top of the screen:

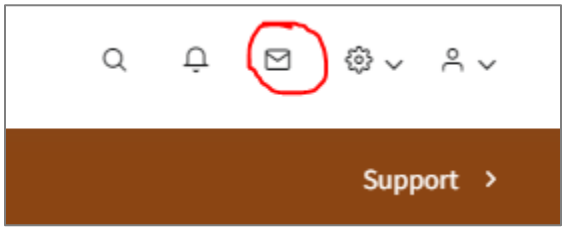

A popup window will come up in which you can put your tag number. You will only be allowed to search for your own tags.

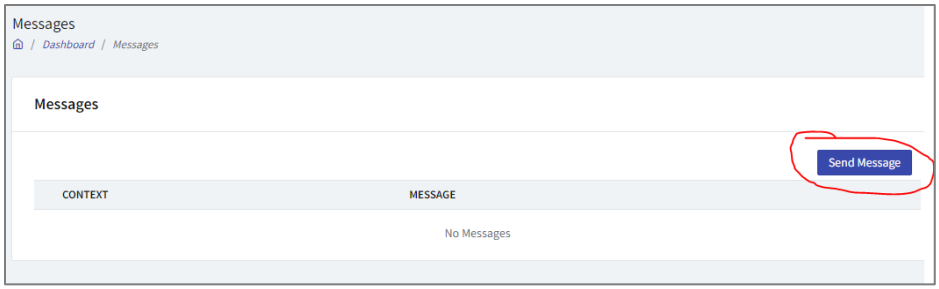

Press ‘Search’. This will take you to the details page of this tag number.

Secure Messaging

Secure messaging is available to send and receive messages within the BlockTrust system. This is especially useful when another member is interested in purchasing a group of animals or needs to discuss confidential financial matters. To access the secure messaging system, to to the ‘messaging’ icon which looks like a small envelope at the top of the screen:

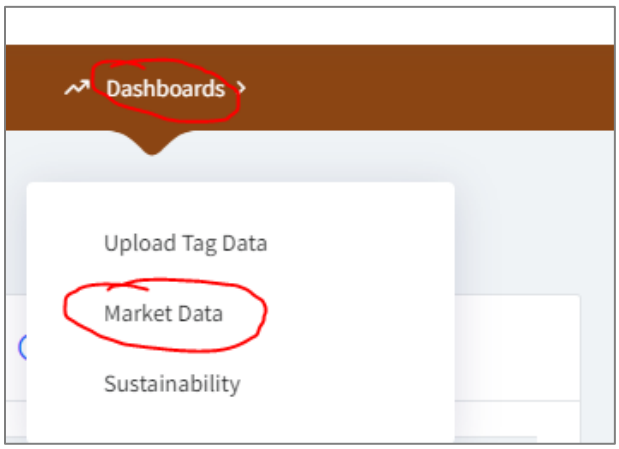

Here you will be able to send and receive messages. If you have any messages waiting, they will be here. To send a message, click ‘send message’. You will only be able to send messages inside the network and possible recipients will show up in a drop down box.

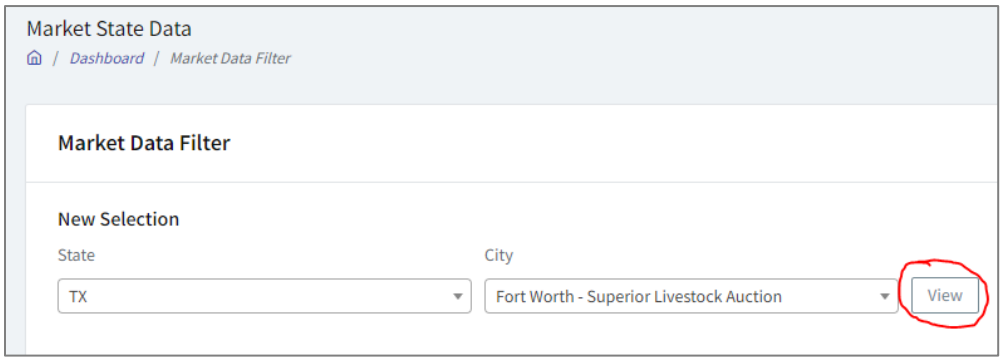

Real-time Market Data

BlockTrust is connected to most of the USDA Market API's and retrieves real-time market data nightly. To find the market near you, go to 'Dashboards' > 'Market Data':

Select your State and City (where the market is located, and click 'View':

You can view your data here. You can click "Add to Favorites" to bookmark this auction to quickly get there next time.
